

**Turn your baffle into
a premium solution –
free of charge!**

**Uptake period
from 1.5.2019
to 31.12.2019**

- 1: Standard baffle without nozzle opening on baffle flange
- 2: Premium baffle with nozzle opening on baffle flange
- 3: PremiumTube, a baffle with Premium nozzle on component flange and with integrated immersion tube
- 4: Baffle cross sections: 4.1 Delta profile and 4.2 Paddled version

One more nozzle on your glass-lined apparatus - without extra charge – **between 1.5.2019 and 31.12.2019**

The THALETEC **PremiumBaffle** (Flyer K020 ) , the **PremiumTube** (Flyer K021 ) and the **DeltaBaffle Premium** (Flyer K057 ) are components for your glass-lined reactors which are essential for the stirring result and for a sure and accurate temperature measurement.

The THALETEC Premium version of these components each has an **additional nozzle** on the component flange. Use this, for example, for

- **introducing liquids** into a highly turbulent flow area of the stirring tank for the particularly rapid and effective mixing of liquids
- **connecting measuring probes**, e.g. for vessel pressure monitoring
- connecting the **inerting** of your reactor
- **extracting gas**
- or, or, or – surely you can think of many other possible ways of using a free nozzle on the glass-lined reactor.

For a limited period, THALETEC is now offering the premium nozzle of these components at a special price:

The Premium Nozzle is included free of charge!

This means: If you order a baffle, Multitube or DeltaBaffle in the period from 1.5.2019 to 30.9.2019, you will receive this by request in the Premium version with an additional, cost free nozzle on the component flange.

You optionally also receive the components with the THALETEC temperature measuring technology **flexsens** (Flyer K053 ) with the particularly rapid **QuickTip** temperature measuring tip (Flyer K061 ) or **QuickTip Tandem** (Flyer K114 ) .

Please refer in your inquiry to the offer in this Flyer A002 for so that we can grant you the discount mentioned.
