

THALETEC Pharma Glass 2000

Meeting stringent requirements in
the pharmaceutical industry

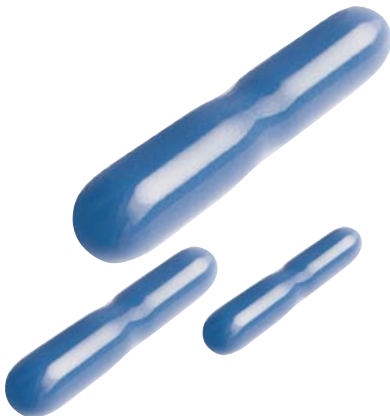

Thale Pharma Email (TPE 2000)

The special glass-lining for the pharmaceutical industry that has been proving its worth in arduous practical applications since the year 2000.

- TPE 2000: Excellent properties for preventing adhesion by biofilms and other forms of contamination.
- TPE 2000: Better chemical resistance than usual chemical glass-linings with caustic solutions. The surface of the TPE 2000 gives with respect to basic processes and cleaning techniques a longer life time to its outstanding sterile characteristics.
- TPE 2000: Special coloration also gives better visibility of transparent, milky and dark contamination.
- TPE 2000: Very limited use of heavy metal oxides (cobalt) in the glass-lining means that products pick up smaller amounts of heavy metals when even highly corrosive processes are involved.

"The hydrophilic characteristics of the Thale Pharma Email 2000 glass-lining provide almost ideal sterility and meet all the requirements for good cleanability".

Jena, May 2000
